

THE FACTS IDAHO

Speak for Health

AN INITIATIVE OF THE
AMERICAN PUBLIC HEALTH ASSOCIATION

PUBLIC HEALTH FUNDING Strong investments in public health allow a state to carry out programs that improve health. Idaho receives \$172 total per person in public health funding from the Centers for Disease Control and Prevention (CDC) and The Health Resources Services Administration (HRSA). In 2021 fiscal year, the Prevention and Public Health Fund awarded over \$2.54 million in grants to Idaho for community and clinical prevention efforts and improvements to public health infrastructure.

ACCESS TO CARE 8.8 percent of people in Idaho do not have health insurance coverage, above the national uninsured rate of 8.6 percent. The number of practicing primary care providers is also an important measure of health care availability. Idaho has 231.6 active primary care providers per 100,000 people, ranking 43rd in the nation. Nationally, there are 265.3 practicing primary care providers per 100,000 people.

Notable Health Measures

- **Violent crime** In 2022, there were 243 offenses per 100,000 people, ranking 9th lowest in the nation. This is well below the national rate of 399 offenses per 100,000 people.
- **Food insecurity** The rate of food insecurity decreased 23.5% from 2016, from 12.1% to 9.8%, ranking Idaho 21st in the nation.
- **Tobacco use** 13.3 percent of adults smoke cigarettes in Idaho, ranking the state 18th lowest in the nation.

The Challenges Ahead

- **Drug deaths** Drug deaths have been consistently increasing over the past decade. In 2010, there were 12 drug deaths per 100,000 people, which climbed to 16.3 drug deaths per 100,000 people in 2022.
- **High school graduation** 80.8 percent of students graduate from high school in Idaho, the 5th lowest graduation rate in the nation. This is of public health concern as there is a strong connection between education and health. People with higher levels of education are more likely to adopt healthy behaviors. The health benefits of educational attainment accumulate and as a result will also impact the community level and social/cultural context.
- **Flu vaccination** 41% of adults received their seasonal flu vaccine within the past 12 months, ranking Idaho 41st in the nation for vaccination rates.
